

THE

23
TWENTY-SECOND ANNUAL REPORT

OF THE

INSPECTORS

OF THE

Philadelphia County Prison,

MADE TO THE

LEGISLATURE,

FEBRUARY, 1869.

PHILADELPHIA:

JAMES B. CHANDLER, PRINTER, 306 & 308 CHESTNUT STREET, [GIRARD BUILDING.]

1869.

BOARD OF INSPECTORS
OF THE
PHILADELPHIA COUNTY PRISON,
1868-69.

PRESIDENT,
JOHN B. BIDDLE, M. D.

SECRETARY,
EDMUND SMITH.

TREASURER,
ISAAC B. GARRIGUES.

JOHN B. BIDDLE, M. D.,	ISAAC B. GARRIGUES,
JOSEPH W. BULLOCK,	HENRY C. HOWELL,
JOSEPH R. CHANDLER,	WILLIAM H. KEICHLIN,
M. G. EVANS,	WILLIAM B. PAGE, M. D.,
JAMES A. FREEMAN,	J. RODMAN PAUL, M. D.,
	EDMUND SMITH.

OFFICERS OF THE PRISON.

SUPERINTENDENT,
WILLIAM B. PERKINS.

PHYSICIAN,
HENRY Y. SMITH, M. D.

CLERK,
JOSEPH K. HOWELL.

MATRONS,
ELLEN L. SPENCER,
ANN G. RYAN.

DEPUTY SUPERINTENDENTS,
JOHN MIRKEL, HOWARD PERKINS.

APOTHECARY, PRISON AGENT,
BENJ. F. BUTCHER, M. D. WILLIAM J. MULLEN.

REPORT.

THE Twenty-second Annual Report of the Board of Inspectors of the Philadelphia County Prison is herewith submitted to the Legislature, in compliance with the requirement of the Act of Assembly of 24th February, 1847.

During the past year the Board has to regret the withdrawal of an esteemed colleague, Christian J. Hoffman, Esq., whose services in various departments of the municipal government have been long and highly appreciated. The vacancy thus made was very acceptably filled by the Court of Common Pleas, in the appointment of Henry C. Howell, Esq., formerly High Sheriff of the County. With this exception, the Board remains constituted as at the date of the last Report; and since its reorganization, in 1856, under appointments from the Courts, changes have been usually made only upon the occurrence of vacancies by the death or resignation of incumbents. A stability of policy has been thus secured in the government of the Prison, which has no doubt greatly contributed to an efficient and faithful administration. Party politics have been ignored in the selection of officers, and, with few exceptions, they have occupied their positions during a long series of years. The successful working of prison discipline requires spe-

cial training and experience from those to whose hands it is committed, and is incompatible with the constant and sweeping changes to which purely political bodies are liable.

An examination of the statistical tables appended to the Report presents several points of unusual interest. The whole number of commitments for the year 1868, was 17,620, against 18,575 for 1867, a decrease of 955; and the commitments for 1867 exhibited also a small decrease, as compared with those of 1866, when they reached 19,468. In 1860, the year preceding the war, the commitments were 20,801. For the first half of the year, from January 1st to July 1st, 1868, the commitments were 8,032; for the second half of the year, from July 1st, 1868, to January 1st, 1869, they were 9,588.

Of the commitments for the past year, there were black males, 979, against 1,025 for 1867; of black females, 494, against 570 for 1867. There were white males, 12,096, against nearly the same number, 12,361, for 1867, and 13,053 for 1866. A very marked decrease is noticeable in the number of commitments of white females, for 1868, as compared with those of the preceding years. There were 4,051 for 1868, against 4,619 for 1867. As the whole number of females committed is scarcely more than one-third of that of the males, the proportionate diminution in the commitments of females is large. This may be considered as fairly attributable to the increased accommodation for female prisoners, which has been afforded during the past year, by the transfer to the Inspectors of the Prison of the

building formerly known as the Debtors' Apartment, adjoining the Prison. Forty-two cells, by this addition, and by an extension which connected it with the old Prison, were added to the Female Department of the Prison. The separation of female prisoners, which was thus made attainable, and the improved means for the enforcement of prison rules and discipline, which were secured, have borne their proper fruits in a marked diminution of vagrancy and crime in the female population of our city.

A comparison of the condition of the Female Department at the close of the years 1867 and 1868, respectively, is gratifying. The whole number of prisoners in the Female Department, including the tried and untried, vagrants, drunkards, &c., on the 31st of December, 1868, was 104. On the 31st of December, 1867, the number was 126; and on previous occasions it had risen much higher—once to 280. In connection with the improved condition of the Female Department, may be mentioned also the important fact, which will be found recorded in the Physician's Report, that the cases reported to him for treatment in this Department were ten hundred and twenty-two less during the year 1868, than during the year 1867. With these results, sanitary as well as moral, which have attended an improvement in the accommodations in one Department of the Prison, a strong argument is certainly presented in favor of an extension of the much more important and overcrowded Department which is devoted to males.

The incapacity of the Prison for the proper confinement

and employment of its large population, demands the serious attention of the authorities of our State and City. In every point of view, not only sanitary and moral, but also economical, the injurious effects of its overcrowded condition are manifest. The results of improved accommodation in the Female Department have strikingly shown that the growth of crime and vagrancy is directly stimulated by the undue congregation of prisoners. The separate system, of which the State of Pennsylvania has been so long considered the especial advocate, has been abandoned in every Department of the Prison, and even in the convict corridors, two, three, and even four prisoners are placed together in a single cell. The Board feels that this subject now imperatively demands earnest consideration; and that, either the extension of the convict blocks, or the construction of a new Prison, is a necessity that can be no longer overlooked. The establishment of a House of Correction, however desirable, would not relieve the crowded state of the convict cells. And, in the opinion of the Board, after long consideration of the subject in all its aspects, a House of Correction for vagrants and drunkards should constitute a Department of the Prison. Its construction might go hand in hand with the extension of the Prison, and would thus be greatly economized; while its future connection with the management of the Prison would obviate the unnecessary multiplication of officials, and would facilitate the working of two coordinate branches of the same service. The Board has seen no reason to change the

opinion expressed in the last Report, that the lot known as the Parade Ground, contiguous to the Prison, would be a very suitable location for these purposes. The large outlay which the purchase of any other suitable ground involves, irrespective of the advantages which this site affords, furnishes a strong argument for its selection; and it is hoped that the difficulties which have been opposed to its use may be finally surmounted.

Of the commitments to the Prison during the past year, about the usual proportion may be considered as connected, directly or indirectly, with intemperance. Thus, of the whole number of commitments for 1868 (17,620), there were 2,025 for *intoxication*; 1,093 for *vagrancy*; 1,462 for *assault and battery*; 8,132 for *disorderly conduct*; and 121 for *assault with intent to kill*. In nearly all these offences, drunkenness is an accompaniment of the special act for which the commitment is made. It would perhaps be unfair to assume that these offences are wholly attributable to intemperance; for crime exists, and prisons swallow up a large proportion of the population, in countries where drunkenness is comparatively infrequent, as in the south of Europe. It is a question which may well claim the most thoughtful consideration of the philanthropist, how far governmental interference should be invoked in attempting the correction of the startling consequences which are traceable to intemperance. Prohibition has not been found to reach the evil. But it is certainly the duty of authority to place checks and restraints upon the temptations to

crime; and some modification of the present wholesale and unbridled license law may well be asked of the Legislature.

Of the prisoners committed for trial during the year 1868 (7,121), 6,072 were discharged by the Committing Magistrates, and 550 by the Grand Jury ignoring the bills of indictment against them. These figures show that nearly twelve-thirteenths of the whole number committed—certainly a most startling proportion—were discharged without being brought to trial. During the year 1867, though the figures were large (out of 5,196 commitments, 4,252 having been discharged without being brought to trial, or about four-fifths), yet they are now fearfully increased. A truly enormous aggregate of commitments for unnecessary or trivial causes is thus presented. That many of them furnish instances of oppression and persecution, which are discreditable to the administration of criminal justice among us, cannot be doubted; and a great reform is needed in our present system of magistracy. The Board believes and has repeatedly urged that three important changes in the organization of our police magistracy are desirable. 1. That they should be learned in the law. 2. That they should receive a fixed and adequate compensation by salary, in the place of fees. And 3. That they should hold their offices by a good behavior tenure, independently of repeated popular elections.

In a considerable proportion of the cases, the discharges were obtained by the direct intervention of the Prison Agent. The whole number of prisoners that were released

by his agency, was 1,603. Of the number liberated, there were 753 males, 820 females, and 30 children, and included in the list were 30 insane persons, who, after their release was obtained, were sent to the Insane Asylum. The whole number of prisoners released through the interference of the Prison Agent, during the last fifteen years, has been 21,792. The chief duties of the Prison Agent are devoted to the abatement and restraint of illegal and oppressive acts on the part of Committing Magistrates.

The diet of the prisoners in the past year has been modified in some particulars, it is believed for the better. For a time during and after the war, the high prices of salt pork made it too expensive for general use, and it was laid aside in the regular rations of the Prison. The variety, however, which the occasional use of this article afforded, was always acceptable, and the want of it was complained of. A weekly dinner of salt meat is now furnished; and beans and other vegetables are also provided in the daily soup made from fresh meat. Cocoa has been substituted for tea at the evening meal—a cheaper, equally invigorating, and more palatable beverage.

Beds as well as blankets are now furnished to all prisoners committed for trial and sentenced prisoners; and moveable boards for bedsteads, arranged so as to turn up against the wall, have been also provided for vagrants. It is believed that these trifling additions to the comforts of the inmates of the Prison will meet with public approval.

The moral and religious instruction and improvement of

the prisoners is carefully provided for. Religious services are held on every Sunday; and devotional appeals are made, on fitting occasions, to individual prisoners, by members of the Visiting Committee of the Prison Society and of the Board of Inspectors. The association of several prisoners in a single cell, doubtless interferes with the good effects of these efforts. A library of well selected books is at the disposal of every prisoner who desires it; and both the Protestant and Roman Catholic translations of the Bible, and the prayer-books of both Churches, are furnished to the Prison by societies and benevolent individuals.

The work of alteration of the Debtors' Apartment, for the use of the Female Department of the Prison, was completed early in the past year, and was done within the limits of the appropriation made by Councils for the purpose. Another very desirable improvement has been also accomplished within the year 1868, viz: the adaptation of the Hospital Building to the purposes of a Laundry. This building, which was designed for hospital objects, in cases of epidemics, had been long useless, and has, at slight expense, been made available for the much required necessity of a convenient laundry. It contains a large drying-room, occupying the whole of the upper story, a spacious washing-room, in the first story, with necessary boilers, heating apparatus, rinsing tubs, &c. The floor near all the tubs is covered with thick sheet-lead, and the lead with wooden gratings, to keep the feet of the washerwomen dry; and there is floor drainage, for the overflow of water. The

effect of this arrangement has been found highly beneficial, in the improved health of the women employed in the Laundry, who suffered much from rheumatism, when working in the old wash-house. An ironing-room, a small refectory, baths, and a water-closet, are also connected with the new Laundry. These arrangements, designed to promote the comfort, health, and convenience of an important branch of the working department of the Prison, will prove a true economy.

The fearful multiplication of the crime of homicide in our city is deserving of notice. Since the last Report, there were four convictions for murder in the first degree, in this County: 1. Hester Vaughan, convicted July 1st, 1868, of the murder of her infant child; 2. Alfred Alexander, convicted July 2d, 1868, of the murder of Phillis Proctor; 3. Gerald Eaton, convicted January 9th, 1869, of the murder of Timothy Heenan; and 4. George S. Twitchell, Jr., convicted January 1st, 1869, of the murder of Mary Hill.

Hester Vaughan and Alfred Alexander have been respited indefinitely; for the execution of Gerald Eaton, the Governor issued his warrant on January 29th, 1869; and George S. Twitchell remains under sentence of death, subject to the future action of the Governor. The four convicts under sentence of death, in the Prison at the date of the last Report, are still in confinement, viz.: Edward J. Ford, Patrick Farrigan, Jerry Dixie, and Newton Champion.

Two cases of suicide occurred in the month of June.

Henry Herptz, committed for vagrancy, shot himself with a pistol. This act induced an order for the examination of prisoners, with a view to the removal of concealed weapons, before locking them up. But soon after, another prisoner, Arthur Fletcher, committed for larceny and burglary, succeeded in taking his life by hanging himself with his belt to the bar of his cell window.

An Act of Assembly confers upon the Inspectors of this Prison and upon the Inspectors of the Eastern Penitentiary the power to discharge convicts at the close of their term, without the payment of costs, or without detention on account of costs. A doubt arose whether this act empowered the Inspectors of the County Prison to remit costs in the cases of prisoners convicted of misdemeanor, and sentenced to imprisonment and the payment of costs, but not to "*hard labor* and separate or solitary confinement." An informal opinion was obtained, by reference to the Judges of the Court of Common Pleas, that the Inspectors were invested with the same power in both classes of convicts. In exercising it, in cases where a good conduct report is had, care is taken to secure any property in the possession of prisoners, or, failing that, an affidavit from the prisoner that he is destitute of means to pay these costs.

The maintenance of prison discipline, in the crowded condition of the cells, requires an unusual exercise of punishment. The dark cell, and a restricted allowance of food, are the inflictions resorted to. The cold douche has been altogether abandoned. Few offences requiring punishment

would have occurred, if the separate system had been in operation. The law, requiring the Superintendent to keep a record of all punishments, their causes and extent, which shall be at all times accessible to official visitors, has been strictly complied with.

The health of the Prison was good during the entire year, and no epidemic of any kind occurred. Twenty-two deaths took place in the Untried Department, viz.: From consumption, 1; debauch, 3; mania-a-potu, 11; debility, 1; diarrhoea, 2; asthma, 2; suicide, 2. In the Convict Department, ten deaths are reported, showing a mortality of 1.07 per hundred; or ten deaths out of nine hundred and thirty-one prisoners. Of these there were seven white males, of whom one died of typhus fever, one of scrofula, one of syphilis, and four of consumption; and three black males, of whom one died of consumption, one of chronic gastritis, and one of heart disease. For interesting details, connected with the sanitary condition of the Prison, reference is made to the Report of the Physician.

The affairs of the Prison during the year have been in a satisfactory condition. The administration of discipline has been faithful and efficient in every department, and the expenditure has not been large, in view of the general expansion of prices.

The Board takes pleasure in bearing testimony to the ability, zeal and fidelity of the Superintendent, Mr. W. B. Perkins, who enjoys the full confidence of the Board, and to whom much of the success of the administration of the

Prison is due. The Clerk, Mr. J. K. Howell, has given satisfaction in the discharge of his official duties. The Physician, Dr. H. Y. Smith, and the Apothecary, Dr. B. F. Butcher, have been prompt and attentive; and in all departments a faithful performance of duty is to be recorded.

The services of the Agent, Mr. W. J. Mullen, have been eminently useful and acceptable in the performance of the peculiar duties which devolve upon him. The Board has undiminished confidence in the integrity and zeal with which the delicate and responsible functions of his office are performed.

The invaluable services of our esteemed colleague, Joseph R. Chandler, Esq., cannot pass unnoticed in a Report of the condition of the Prison. For many years he has devoted his life to the service of the Institution, spending most of his time in it, and giving to it the benefit of all his energies, mental and bodily.

The expenses of the Prison for the year 1868, were \$104,631 63. The profits of the Shoe Manufactory were \$2,756 94. No weaving was done except for prisoners' clothing. The amount received from the United States Marshal, for the support of United States prisoners, was \$1,480 80. The estimated value of provisions, coal, and dry goods on hand, is \$4,287 83. The return to the City Treasury from the Shoe Department, was \$17,000 00.

The usual table is subjoined, affording a comparison of the expenses of the Prison for the last fourteen years :

Year 1854,	there were	11,588	prisoners,	costing	\$78,288	18

PHYSICIAN'S REPORT.

*To the President and Members of the Board of Inspectors
of the Philadelphia County Prison.*

GENTLEMEN :—In accordance with the usual custom, I herewith present to the Board of Inspectors the Twenty-second Annual Report of the Medical Department of this Institution, with the various statistical tables for the past year. In so doing, I find but little to add. I take pleasure in stating that the general health of the prisoners continues good. During the year no epidemic occurred; there were very few attacks of severe diseases, and most of the cases that did occur were easily controlled.

The diseases differed but little from those reported in former years, caused, as usual, by the terrible vice of intemperance, the victims of which form a large proportion of the patients who present themselves to our notice. When we consider the constitutional condition of the large majority of the prisoners admitted to this prison, enfeebled and broken down by exposure, poverty, and debauchery, as they are in many instances, the result to be deduced from the statistical tables will compare favorably with any other similar institution in the country.

On the 31st day of December, 1867, there were in the Untried Department, three hundred and eighty-four persons; received during 1868, seventeen thousand six hundred and twenty, making a total of eighteen thousand and four; nine hundred and ninety-nine less than during the previous year. For the different diseases treated in this department of the prison see table No. 3, continued, which gives a resumé of all sickness occurring, monthly. Seven births took place during the year, as follows: in the Untried Department, four whites and one black; and in

the Convict Department, two whites; also seventeen miscarriages. There were twenty-two deaths in the Untried Department, as follows: Phthisis Pulmonalis, 1; Debauch, 3; Mania-a-potu, 11; Debility, 1; Diarrhœa, 2; Asthma, 2; Suicides, 2, one by shooting, and one by hanging.

The ratio of mortality for all cases, as compared with the number of prisoners, was twelve hundredths of one per cent., or twenty-two deaths out of eighteen thousand and four persons. The deaths for the year occurred principally among those committed for vagrancy, disorderly conduct, and breaches of the peace—a class of persons who indulge freely and largely in the use of intoxicating liquor, and who make regular, periodical visits to the prison. In this connection there is especially a class of prisoners that call loudly for our sympathy and care. It is well known that a large number of insane poor and idiots (a majority of them non-criminals) are constantly being picked up in the streets, or committed by their friends for safe keeping, with the object of having us send them to the Almshouse. This Institution is no place for such persons, even should we have room for them, which we have not; besides, few know the difficulty we experience in having them removed to the Almshouse, and we have no place else to send them; even after securing their admission there, they are allowed in many instances to leave that Institution, almost whenever they please, returning again to us often in a few days. To avoid much of this annoyance and difficulty, those persons should be sent direct from the Alderman's office, or we should have the power to send them there without the permission of outside parties, whose consent, under the present system, we must first obtain. Something, I hope, will soon be done to secure for these poor beings a better home than a prison or Almshouse. I would also, in this connection, express my obligation to the Prison Agent, for his prompt assistance in procuring the necessary papers for the removal or discharge of this class of prisoners.

There has been little or no diminution, during the past year, in the over-crowding of the cells in this department, the number of commitments having been so large as to require, in many instances, the confinement of from two to four prisoners in each cell. This state of affairs has been frequently noticed by the Judges of the Court of Quarter Sessions, in their charges to the Grand Juries; and the Grand Juries of the County have several times presented these facts to the Court, and insisted upon the necessity for the erection of a House of Correction, and

of an extension of the present County Prison. The advantages to be derived from such an institution as a House of Correction, have been so fully and frequently set forth, that a repetition of them here would be useless. Every one who has visited the prison, must have seen the great necessity which exists for more extended accommodations for prisoners. Yet, notwithstanding the call annually made by your Board for this relief to the prison, it is still unaccomplished, while the officers of the prison have been unjustly censured by a Grand Jury for confining so many in one cell. The fact must be patent to every one, that with the present limited accommodations, it is utterly impossible to comply with the requirements of the law.

The "Convict Department," like the Untried, has also, during the past year, been very much over-crowded. But few instances of fatal disorders originated in the cells, and very perceptible improvement occurred among many who had previously been leading a career of dissipation, privation and exposure. The number of prisoners sentenced to hard labor in 1868, was four hundred and eighty-six; remained in prison on December 31st, 1867, four hundred and forty-five; total, nine hundred and thirty-one; eighty-eight more than last year. Of these there were ten deaths; one died in January, two in March, one in June, four in August, one in September, and one in December. For particulars in relation to the ten prisoners—Nos, 502, 576, 597, 691, 693, 1159, 1549, 1554, and 1936, see table No. 17, which gives color, sex, when committed, former health and habits, (as far as known,) time and cause of death.

The mortality per cent. in this department was 1.07, one and seven-hundredths of one per cent., or ten deaths out of nine hundred and thirty-one prisoners. The prisoners discharged during the year were, white males, 365; black males, 85; white females, 62; black females. 25; and may be arranged in the following classes, in reference to their health on admission and discharge.

1st. Received and discharged in good health,	-	-	-	-	141
2d. " " in the same grade of imperfect health,					109
3d. " " better health than when received,	-				189
4th. Discharged in worse health than when received,	-	-	-		88
5th. Died during the year,	-	-	-	-	10

 537

For further details I respectfully refer you to the accompanying tables.

The Sanatory condition of the prison is all that could be expected in a prison. The cleanliness manifested, especially in the Female Department, and the Convict Block, is worthy of the highest commendation. As to the Untried Department, it is impossible to keep it as it should be, owing to the filthy character of a majority of the prisoners, who are out and in constantly, giving scarcely time to have the cells cleaned before they are again filled with the same class of persons. A change is intended to be produced in the diet during the coming year, thereby relieving the sameness of the food; such a change is judicious, and will be, in my opinion, beneficial to the prisoners.

In conclusion, one word as regards those who become insane after conviction, or during their imprisonment, some effort ought to be made to have them placed under more favorable influences for their restoration to health, than has been heretofore the case; so long as they are subject to the same prison discipline as the sane prisoners, the use of medicine alone will avail but little for their recovery. If removed to a well regulated asylum, while their diseases are in a curable stage, many might be saved, who otherwise would, if remaining with us, either die, or not be discharged until their maladies are beyond the reach of art.

I again avail myself of this opportunity to acknowledge my indebtedness to the Superintendent, and to Dr. B. F. Butcher, for the cheerful and valuable services rendered me in the discharge of my professional duties. And to you, gentlemen, my most grateful acknowledgment for the uniform kindness and indulgence which has characterized all your intercourse with me.

All of which is respectfully submitted.

H. YALE SMITH,

Physician to the Philadelphia County Prison.

The following Table shows the number of Prisoners sentenced to hard labor, also the average number of deaths, and the mortality per centage annually, for the last twenty years.

YEAR.	Average number of Commitments.	Number of Deaths.	Mortality per cent.
1847	175	16	9.14
1848	160	13	7.50
1849	176	7	3.40
1850	154	8	5.12
1851	245	11	4.08

* Removed from Walnut Street Prison.

† Removed from Arch Street Prison, where this fever was prevalent, and many of the inmates died thereof.

‡ Their disease was caused by masturbation.

The prisoner who died October 19, 1865, was under sentence of death, had been respited twice, and awaiting the action of the Governor.

No. 20.

General Statement of all the cases of sickness among the Prisoners sentenced to hard labor in the Philadelphia County Prison for the year 1868.
